Bill Nye The Science Guy's Great Big Dinosaur Dig

Synopsis

Ancient dinosaurs lived over 65 million years ago, but they have fascinated human beings since the first fossil discovery. In this book, science expert and television celebrity Bill Nye the Science Guy tells us how dinosaurs become fossils, how they must have behaved, and why we call their descendants "birds." • Featuring over thirty different species of dinosaurs, each chapter has an easy-to-follow experiment that readers can do at home.

Age Range: 6 - 9 years

Grade Level: 1 - 4

Customer Reviews

I loved Bill Nye the Science Guy as a kid and now that my son (4years old) is into dinosaurs I couldn't pass up buying this book. It is a great book. My son and I love doing all the experiments in each chapter. The book is educational and fun. It is a favorite of both me and my son. I would highly recommend this book.

great book as a long time fan of bill nye it's everything i expected and more and the seller said it was in acceptable condition it's like new! Bill Nye the Science Guy's Great Big Dinosaur Dig

My five year old wanted to study dinosaurs for her first school study...found this at the library. I've

now had it for 6 weeks (the limit to renew)...and she's so sad we can't keep it longer. There are experiments for almost every concept, and they aren't only useful for dinosaurs, though they're related. We've had fun doing them, and I'm learning things I didn't know before while everything is still simple enough my five year old is getting it too. The pictures are colorful, the explanations short...only maybe 10 minutes per concept, and the experiments take very little preparation. I like it so much I'm here looking for more.
