The Complete Guide To Prehistoric Life

Synopsis

The most exciting view of prehistoric life. "Comprehensive, illustrated encyclopedia to prehistoric animals... lifelike detail... this easily readable book should appeal to dinosaur enthusiasts of all ages." -Science News

Book Information

Paperback: 216 pages

Publisher: Firefly Books; Reprint edition (January 19, 2007)

Language: English

ISBN-10: 155407181X

ISBN-13: 978-1554071814

Product Dimensions: 8.5 x 0.8 x 10.8 inches

Shipping Weight: 1.6 pounds

Average Customer Review: 4.5 out of 5 stars [See all reviews](#) (30 customer reviews)

Best Sellers Rank: #662,081 in Books (See Top 100 in Books) #88 in [Books > Science & Math > Biological Sciences > Animals > Dinosaurs](#) #131 in [Books > Science & Math > Biological Sciences > Animals > Fossils](#) #280 in [Books > Science & Math > Biological Sciences > Paleontology](#)

Customer Reviews

I don't think one could quite call this a "complete" guide to prehistoric life, however it is very informative and a lot of fun to read. The many computer-generated graphics in the book are generally very good, they do a nice job of bringing the animals to life. The book is divided into three parts, covering the four geological eras, the Precambrian and Paleozoic are both covered in part one. Each part opens with a high level overview of each of the periods of that era, I think these overviews really tied the book together nicely. Following this a selection of animals from that era are presented; with one exception, there are no animals from the Precambrian. Typically one or two pages are devoted to each animal, including text and graphics. The computer-generated graphics are ubiquitous; sometimes there are photos of fossils. I thought the text was very informative and interesting for every animal, not a bad section in the entire book. I liked the selection of animals. Not surprisingly the animals covered were biased to those with extreme characteristics, e.g. the biggest arthropod or the largest land predator. There were the animals that show up in pretty much every book of this type, for example: Trilobites, Haikouichthys, Dunkleosteus, Stegosaurus, Tyrannosaurus, Smilodon and Megalodon. There were also some that seem to be less commonly

covered, at least in my experience: Pterygotus (a nine foot arthropod), Arthropleura (an 8.5 foot arthropod), Lystrosaurus (an interesting looking therapsid), Leedsichthys (an 88 foot fish), Didelphodon (a cretaceous mammal), Doedicurus (a huge armadillo) and many more. Based on page count, or number of animals, the presentation clearly leans towards the Mesozoic.
